Touch technology - Capacitive
The Projective Capacitive (PCAP) touch technology with 12 touch points ensures a seamless and accurate touch response. With its AMVA3 LED panel, it offers exceptional colour performance, high contrast and wide viewing angles.

This technology uses a sensor-grid of micro-fine wires integrated into the glass that covers the screen. Touch is detected because electrical characteristics of the sensor grid change when human finger is placed on the glass. Thanks to the glass overlay this technology is highly durable, and the touch function remains unaffected even if the glass is scratched.

Smart Design
The sleek look is achieved with a striking aluminium surround and edge-to-edge vandal proof tempered glass front panel

Plug and Play
If there is no internet access available the screen can still be updated thanks to their backup USB update option.

24/7 Commercial Use
A commercial grade panel, with a lifespan of 50.000 hours and high quality compenets ensure that this display can be in constant use 24/7.
